- Create Corridor: Link alignment and profile with templates.
- Apply Superelevation: Model superelevation for curves to account for lateral forces.
- Refine Model: Adjust parameters for smooth transitions and grading.

- Surface and Earthwork Calculations

Accurate earthwork estimation is critical for project budgeting.

Steps:

- Generate Surfaces: Import survey data or existing terrain models.
 - Create Design Surfaces: Develop proposed ground models from corridor data.
 - Calculate Volumes: Use cut-and-fill tools to determine earthworks needed.
 - Review and Optimize: Identify areas for cut or fill to optimize construction costs.
-
- Producing Reports and Documentation

Effective communication of designs requires detailed reports.

Types of Reports:

- Alignment and profile reports.
- Cross-section summaries.
- Earthwork volume summaries.
- Quantity take-offs.

Ensure reports include clear annotations, legends, and coordinate information.
