Features of FRAs:

- Customized agreements
- Settled in cash
- No exchange of principal

The reference interest rate upon which the derivative's value depends, often a benchmark like LIBOR, SOFR, or treasury yields.

Notional Principal

The theoretical amount used to calculate payments; typically, no actual principal exchange occurs.

Payoff and Settlement

The cash flow resulting from the derivative based on the underlying interest rate movement, settled either at maturity or periodically.

Maturity

The time until the derivative contract expires.

Counterparty Risk

The risk that the other party may default on their contractual obligation.

Pricing and Valuation of Interest Rate Derivatives

Valuation of interest rate derivatives involves complex models that incorporate current interest rates, volatility, and the term structure of interest rates.
