The Significance of 2002 in the Context of Economic Historiography

It bridges the gap between traditional classical and neoclassical ideas and emerging heterodox approaches, emphasizing the dynamic, evolving nature of economic thought.

Overview of the Book's Structure and Content

The book is organized into several key sections, each dedicated to different eras or schools of economic thought. This structure facilitates an understanding of how ideas developed over time and how they influenced subsequent theories.

Part I: Foundations of Economic Thought

This introductory part lays the groundwork by discussing the origins of economic inquiry, touching on

early mercantilist ideas, physiocracy, and the classical school. It emphasizes the philosophical underpinnings of economics and introduces key figures such as Adam Smith, David Ricardo, and Thomas Malthus.

Part II: Classical Economics

Focusing on the classical school, this section explores the contributions of Adam Smith's *Wealth of Nations*, Ricardo's theory of rents, and Malthusian population dynamics. Part IV: The Evolution of Keynesian Economics

Addressing the 20th-century shift, this part discusses John Maynard Keynes's revolutionary ideas, especially his *General Theory*. It examines how Keynes challenged classical assumptions and laid the groundwork for macroeconomic policy.
