Solution Approach:

- Analyze texture, mineral composition, and formation clues.
- Cross-reference with images and descriptions in the manual.
- Use the mineralogy and grain size to determine the rock type.

Example:

A coarse-grained rock with visible quartz and feldspar might be classified as granite, an intrusive igneous rock.

- Stratigraphic Correlation

Exercise Overview: Match layers from different outcrops based on fossil content, grain size, or mineral composition.

Solution Approach:

- Identify unique fossils or mineral markers.
- Note sedimentary structures or features.
- Use chronological principles (superposition, lateral continuity).

Example:

Matching a shale layer containing a specific fossil across multiple locations indicates a correlation of the same stratigraphic horizon.

- Geological Mapping and Cross-Section Drawing

Exercise Overview: Create or interpret geological maps and cross-sections.

Solution Approach:

- Use provided data points, symbols, and legends.
- Apply principles of strike and dip to interpret bedding orientations.
- Ensure the cross-section accurately reflects the mapped data.
