Regulatory agencies such as the European Aviation Safety Agency (EASA), Federal Aviation Administration (FAA), and other national authorities establish mandatory requirements for aircraft maintenance, inspection intervals, and record-keeping.

Manufacturer Guidelines:

Airbus provides detailed Maintenance Planning Documents (MPDs), which outline scheduled maintenance tasks, inspection intervals, and recommended practices for each aircraft variant within the A320 family (including A318, A319, A320, A321). These documents are periodically updated based on new data, technological improvements, and operational feedback.

Key Components of Regulatory and Manufacturer Guidelines:

- Minimum Equipment List (MEL): Specifies the conditions under which certain systems or components can be deferred or operated with known deficiencies.
- Maintenance Planning Document (MPD): Defines scheduled tasks, intervals, and procedures.
- Service Bulletins and Service Letters: Provide updates on modifications, inspections, or corrective actions.

Adherence to these guidelines ensures the aircraft remains compliant with international standards and mitigates risks related to safety and operational disruptions.

Scheduled Maintenance Activities

Scheduled maintenance for the A320 is based on a combination of time-based and cycle-based intervals, designed to identify potential issues before they impact safety or reliability.

Line Maintenance Checks

Line maintenance activities are routine and performed frequently, often daily or after a set number of flight hours or cycles.

Typical Line Checks Include:

- Pre-flight Checks: Inspection of exterior surfaces, fluid levels, tire pressures, and system statuses.
- Post-flight Checks: Review of flight data, leak detection, and visual inspections.
- Quick Turnaround Checks: Brief inspections during short layovers, focusing on critical systems.

Heavy Maintenance Checks (A, B, C, and D Checks)

Airbus and airline maintenance programs classify more comprehensive inspections into D, C, B, and A checks, performed at increasing intervals.

- D-Checks (Major Overhaul):

Conducted approximately every 6-10 years, involving extensive disassembly, inspection, and refurbishment. These are scheduled during heavy maintenance periods and often involve significant downtime.

- C-Checks:

Usually every 20-24 months, these include detailed inspections of major structural components, systems, and aerodynamics, often requiring the aircraft to be taken out of service for several days.

- B-Checks:

Conducted roughly every 6-8 months, focusing on systems and components that require partial disassembly, but less extensive than C-checks.

- A-Checks:

The most frequent, performed approximately every 400-600 flight hours or every 200-300 flights. These are quick inspections, often completed overnight, covering basic systems, fluid levels, and exterior checks.
