Structure of the Mark Scheme

The Jan 2013 mark scheme is organized systematically, typically including:

- Question-specific Mark Schemes

Each question or part of a question has its own detailed marking guidance, often broken down into:

- Levels of Response: For longer answers, marking is often based on a level-based approach, with descriptors for each level indicating the quality of response.
- Indicative Content: Essential points or knowledge that students are expected to mention to achieve certain marks.

- Command Words and Their Expectations

The scheme clarifies what each command word (e.g., explain, evaluate, compare) requires in terms of depth and breadth of response.

- Assessment Objectives

The mark scheme aligns with assessment objectives, such as knowledge and understanding, application, analysis, and evaluation, guiding students on how to structure their answers.

Deep Dive into Key Aspects of the Mark Scheme

- Knowledge and Understanding (AO1)

This section emphasizes the importance of accurate recall and understanding of business concepts, terminology, and theories.

Key points include:

- Use of precise terminology (e.g., cash flow, economies of scale).
- Definitions should be clear and concise.
- Use of factual information to support explanations.

Example: For a question on profit maximization, the mark scheme expects a definition such as:

"Profit maximization is the process of a business aiming to achieve the highest possible profit by maximizing revenue and minimizing costs."

- Application (AO2)

Application involves linking knowledge to the context provided in the question.

Guidelines include:

- Using real-world examples or data from the question.
- Demonstrating understanding of how concepts operate in specific business scenarios.
- Applying theories to analyse particular situations.

Example: When discussing how a new competitor affects a firm's market share, students should relate to the specific industry or example given in the question, such as a local supermarket chain.

- Analysis and Evaluation (AO3)

This is often the most critical part for higher marks. The mark scheme rewards students who:

- Analyze causes and effects.
- Weigh up arguments for and against.
- Make balanced judgments.
- Use evidence to support their points.

For example: In evaluating a decision to expand internationally, the scheme expects students to consider both potential benefits (e.g., increased sales, diversification) and drawbacks (e.g., cultural differences, political risks).

- Level-Based Marking (for Extended Response Questions)

The scheme categorizes responses into levels based on quality:

Level	Description	Typical Characteristics
4	Excellent analysis and evaluation, well-structured	Clear, detailed, supported by evidence, balanced arguments
3	Good understanding, some analysis	Good structure, relevant points, some support
2	Basic explanation, limited analysis	Limited depth, some knowledge shown
1	Minimal or superficial response	Lacks understanding or relevance

Students should aim for Level 4 responses by providing comprehensive, well-supported answers.

Common Question Types and How the Mark Scheme Guides Responses

- Multiple-Choice and Short-Answer Questions

The mark scheme specifies correct answers and common misconceptions to watch out for. Marks are awarded straightforwardly based on accuracy.

- Explain and Describe Questions

The scheme expects clarity and sufficient detail. For example:

- Explain questions require a detailed account of how or why something happens.
- Describe questions focus on outlining features or characteristics.

Example: To explain the benefits of a high brand value, the scheme expects points such as customer loyalty, premium pricing, and competitive advantage.

- Analyse and Evaluate Questions

These are more demanding, requiring students to:

- Break down concepts.
- Discuss implications.
- Make judgments.

The mark scheme highlights the importance of balanced arguments, evidence, and critical thinking.

Example: When evaluating whether a business should diversify, responses should consider potential risk reduction versus increased complexity.
