Multiple Alleles and Polygenic Traits

- Traits controlled by more than two alleles (e.g., blood groups).
- Polygenic traits involve multiple genes contributing to the phenotype (e.g., milk yield, growth rate).

Epistasis and Gene Interactions

- Epistasis occurs when one gene masks the effect of another.
- Example: coat color determined by multiple interacting genes.

Linkage and Recombination

- Genes located close together on a chromosome tend to be inherited together.
- Recombination during meiosis can break linkage, creating new allele combinations.
