Question 1: Multiple Choice

Which of the following elements has an atomic number of 8?

- a) Nitrogen
- b) Oxygen
- c) Fluorine
- d) Neon

Answer: b) Oxygen

Question 2: Short Answer

Explain why metals are good conductors of electricity.

Sample Answer: Metals are good conductors because they have free electrons that can move throughout the metal lattice, allowing electric charge to flow easily.

Question 3: Calculation

Calculate the number of moles in 24 grams of carbon dioxide (CO₂). (Ar of C=12, O=16)

Solution:

- Molar mass of CO₂ = 12 + (16×2) = 44 g/mol
- Moles = mass / molar mass = 24 / 44 = 0.545 moles

Question 4: Extended Response

Describe the process of electrolysis of molten sodium chloride and explain the products formed.

Sample Answer: During electrolysis of molten sodium chloride, an electric current causes the sodium ions (Na^+) to migrate to the cathode, where they gain electrons and form sodium metal. Chloride ions (Cl^-) migrate to the anode, where they lose electrons to form chlorine gas. This process produces sodium metal at the cathode and chlorine gas at the anode.
