Core Topics and Practical Exercises

VLAN Configuration and Management

One of the foundational exercises involves configuring VLANs (Virtual Local Area Networks). Students learn how to segment networks logically to improve performance and security. The manual guides instructors through:

- Creating VLANs on switches
- Assigning switch ports to VLANs
- Verifying VLAN configurations
- Testing connectivity between devices within the same VLAN

Answer sections detail command-line configurations, such as:

```
``plaintext
```

```
Switch> enable
```

```
Switch configure terminal
```

```
Switch(config) vlan 10
```

```
Switch(config-vlan) name Sales
```

```
Switch(config) interface fastethernet 0/1
```

```
Switch(config-if) switchport mode access
```

```
Switch(config-if) switchport access vlan 10
```

```
...
```

Expected results include successful VLAN creation and correct port assignments, verified through commands like `show vlan brief`.

Inter-VLAN Routing

Since VLANs are isolated at Layer 2, inter-VLAN routing is necessary for communication between VLANs. The manual walks instructors through configuring:

- Router-on-a-stick configurations using sub-interfaces
- Assigning IP addresses to sub-interfaces
- Verifying routing between VLANs

Sample answer configurations include setting up sub-interfaces:

```
``plaintext
```

```
Router> enable
```

```
Router configure terminal
```

```
Router(config) interface gigabitEthernet 0/0.10
```

```
Router(config-subif) encapsulation dot1Q 10
```

```
Router(config-subif) ip address 192.168.10.1 255.255.255.0
```

```
...
```

Testing connectivity with `ping` commands confirms proper inter-VLAN communication.

Trunking Protocols and Configurations

Trunk links carry multiple VLANs across switches. The manual provides guidance on:

- Configuring trunk ports
- Using protocols like IEEE 802.1Q
- Verifying trunk status with `show interfaces trunk`

Answer explanations include setting switch ports as trunk:

```
``plaintext
```

```
Switch(config) interface fastethernet 0/1
```

```
Switch(config-if) switchport mode trunk
```

```
Switch(config-if) switchport trunk encapsulation dot1q
```

```
...
```

Proper trunk configuration ensures seamless VLAN traffic flow.

Network Security Measures

Security is a critical focus. Exercises include:

- Securing switch ports (e.g., disabling unused ports)
- Implementing port security features
- Configuring access control lists (ACLs)
- Verifying security settings

Sample configurations demonstrate setting port security:

```
``plaintext
```

```
Switch(config) interface fastethernet 0/1
```

```
Switch(config-if) switchport port-security
```

```
Switch(config-if) switchport port-security maximum 2
```

```
Switch(config-if) switchport port-security violation restrict
```

```
...
```

These exercises help students understand how to safeguard network infrastructure.
