Question:

Suppose Country A and Country B produce two goods, X and Y. Country A has a comparative advantage in good X, while Country B has a comparative advantage in good Y. Using the principles from Feenstra and Taylor, explain the potential gains from trade between these countries and illustrate this with a graph.

Step 1:

Identify the comparative advantage of each country.

Step 2:

Explain the concept of gains from trade, emphasizing increased consumption possibilities.

Step 3:

Draw a Production Possibility Frontier (PPF) for both countries, showing their opportunity costs.

Step 4:

Construct an Edgeworth box or trade triangle to illustrate mutually beneficial trade.

Step 5:

Discuss how trade allows both countries to specialize and consume beyond their PPFs.

Answer Overview:

Trade enables Country A to specialize in producing good X, where it has a comparative advantage, and exchange some of it for good Y from Country B. Both countries can reach higher levels of utility and consumption than under autarky. Graphically, the trade line or contract curve demonstrates the efficient allocation resulting from specialization and exchange.
